
International rate cutter Terms & Conditions

Description:

International rate cutter helps in reducing the rate of international calls for selected countries as specified by the product, and needs to be bought to be activated.

How it works:

1. Rate cutter needs to be activated either by recharge or by direct debiting from the account balance.
2. Once rate cutter is activated for the account, all the users within the account will get discounted rates for international calls.
3. Please ensure that the users under the account have been given access to make international calls.
4. For US alone, the cost per minute of calling will be the call rate based on the tariff plan chosen for recharge, once rate cutter is active.
5. Rate cutter ceases to be effective once the validity expires and during this period, standard international card rate will be applicable for all international calls.

Terms & Conditions

1. Rate cutter validity is independent of the recharge validity.
2. Rate cutter validity is active even when the recharge validity has expired, and will remain active until defined time.
3. Reduced rate is applicable only for the countries specified in the plan and for other countries the standard card rate applies.
4. Rate cutter is applicable only for mobile and landline numbers of the listed countries. Special/Satellite numbers are not covered under the rate cutter.
